

“How To Get \$244 Worth Of Computer Speed Software And Information For Windows XP For Less Than A Steak Dinner For 2!”

Speed speed and more speed that's what we want from our computers. The problem has been how to get that speed. Well now the problem has been solved! What you really need to have speed is a **computer speed system**.

A computer speed system is a collection of several pieces to a puzzle. Once you put these pieces together you always have a fast computer. Lucky for you someone gave you this e-book because the pieces are about to be put together for you.

You are about to learn how to:

- eliminate computer freeze ups
- prevent computer crashes
- extend the life of your computer indefinitely and
- create computer speed that you have never seen before

Normally computer speed has been gotten by making one or two changes to your computer. The most popular is simply adding more memory or getting a bigger hard drive which of course works but it doesn't solve the problem.

What is slowing down your computer?

Computer speed has five specific parts to it. When you address only one or two of these parts you don't get the kind of speed that you really want.

The parts to computer speed are:

- 1) Windows XP software settings.
- 2) Windows XP tweaks, adjustments, and maintenance
- 3) Spyware and Adware removal
- 4) Antivirus Software
- 5) Software to organize your hard drive

If you concentrate on learning about and implementing those 5 things you get computer speed.

Of course there is still a problem! It will take you a **long time** to learn all about these five items.

This e-book is a shortcut. By going to our site and using our recommendations you don't have to bother learning all that stuff. And you can have computer speed almost instantly.

Why? Because we have done the research and created software that handles the computer speed problem quickly and easily.

To put it in simple English “we have created a computer speed system that you can use on your computer now.”

Our computer speed system has these five parts:

1) Windows XP software settings are hard to find and sometimes it's very difficult to make the adjustments. So what we decided to do was make a piece of software that automatically adjusts vital Windows XP settings with a click of a button. This alone is a \$97 value!

2) We have found **82** Windows XP speed secrets that tweak, maintain and adjust Windows XP and put them in a simple digital e-book. The information and research we put into this book is worth \$47.

- 3) We have found the best adware and spyware remover on the Internet and it is included in our system for free. This is a \$30 value.
- 4) In chapter 5 on page 16 of the e-book we show you where to get free antivirus software. We especially like the second one that is recommended there. Software of this type is sold for \$70 and more!
- 5) In chapter 2 on pages 9 and 10 we recommend a software that will automatically organize your computer while you sleep every day. This will extend the life of your computer almost indefinitely.

As you can see we've done a lot of your homework for you when it comes to computer speed.

The really exciting part about our computer speed system is...

A.) It doesn't cost much

and ...

B.) You don't have to go to the trouble of learning all this stuff.

Give this e-book to your friends, associates and family so they can have computer speed too.

Everything you'll ever need to know about our computer speed system can be found at one of these web sites:
